

Current Testable Features

1. User Registration

The frontend has a dedicated registration page and validation logic.

Functional Tests

- Register with valid details
- Register with existing email
- Register with invalid email
- Password too short
- Weak password
- Password confirmation mismatch
- Empty fields
- Username validation
- Special characters
- Leading/trailing spaces
- Maximum input lengths

UI Tests

- Error messages appear correctly
 - Password visibility toggle
 - Loading indicator
 - Success modal/message
 - Register button disabled during request
-

2. Login

A complete login screen exists.

Functional Tests

- Login with valid credentials
- Invalid password
- Invalid email
- Empty fields

- Email format validation
- Case sensitivity
- Remember session (if implemented)
- Logout

Error Handling

- Incorrect credentials
 - Server unavailable
 - Network disconnected
 - Timeout
-

3. Authentication Flow

The project contains:

- Auth Context
- Login Store
- Register Store
- Home screen after login

Test

- User redirected after login
 - User stays logged in
 - Logout clears session
 - Unauthorized user cannot access Home
-

4. Home Screen

Currently minimal.

Test:

- Username displays correctly
 - Logout works
 - User data loads properly
-

5. Form Validation

There are dedicated validators:

loginvalidator.ts
registrationValidator.ts

Test every validation rule individually.

6. API Testing (Backend)

The backend includes Swagger docs.

Possible API tests:

- Register endpoint
 - Login endpoint
 - Authentication tokens
 - Invalid requests
 - Missing fields
 - Invalid JSON
 - Unauthorized requests
 - HTTP status codes
 - Response schema
-

7. Error Handling

Test:

- Backend offline
 - Slow network
 - Invalid server responses
 - API timeout
 - Duplicate registration
 - Expired authentication
-

8. Cross Platform

Since this is Expo:

Test on

- Android
- iOS
- Web (if enabled)
